

Massachusetts Chapter

The Massachusetts Chapter of the Fulbright Association
Cordially invites you to a presentation by Roy Freed entitled:

How Your Evolution-Created Universal Mind Makes You Uniquely Who and What You Are and Society What It Is

Sunday, 17 April 2011

2:00 P.M. until 4:00 P.M.

Dr. Jim Reed, chairman of the Massachusetts Chapter of the Fulbright Association, cordially invites you to hear, and discuss, Roy Freed's unique personally-derived functional perception, for non-scientists, of how evolution's natural selection simultaneously designed, and created, the universal normal human mind to make it the most amazing machine imaginable.

Roy is a very long-retired lawyer who introduced computer law to the world in 1960, was a Fulbrighter in Bulgaria at age 72 with his wife, Anne, and with, Anne, was instrumental in establishing the Massachusetts Chapter of the Fulbright Association.

Roy reasons that the mind protects its unique subjectivity, mind-set, or ego by its ambiguous instinct, or drive to survive, often leading to verbal argumentation, or even violence, to produce often annoying social polarization, as in the United States right now..

Come see if you agree with him that the only reasonable antidote is to foster objective critical thinking, which can be both intellectually enjoyable and socially constructive.

Location:

808 Commonwealth Avenue
Room 109
Boston, Massachusetts 02215
Boston University Charles River Campus

(Near the St. Paul stop on the C Branch of the Green Line)
